

# In a makeshift camp ...

You both will get better.

Thank you, doctor

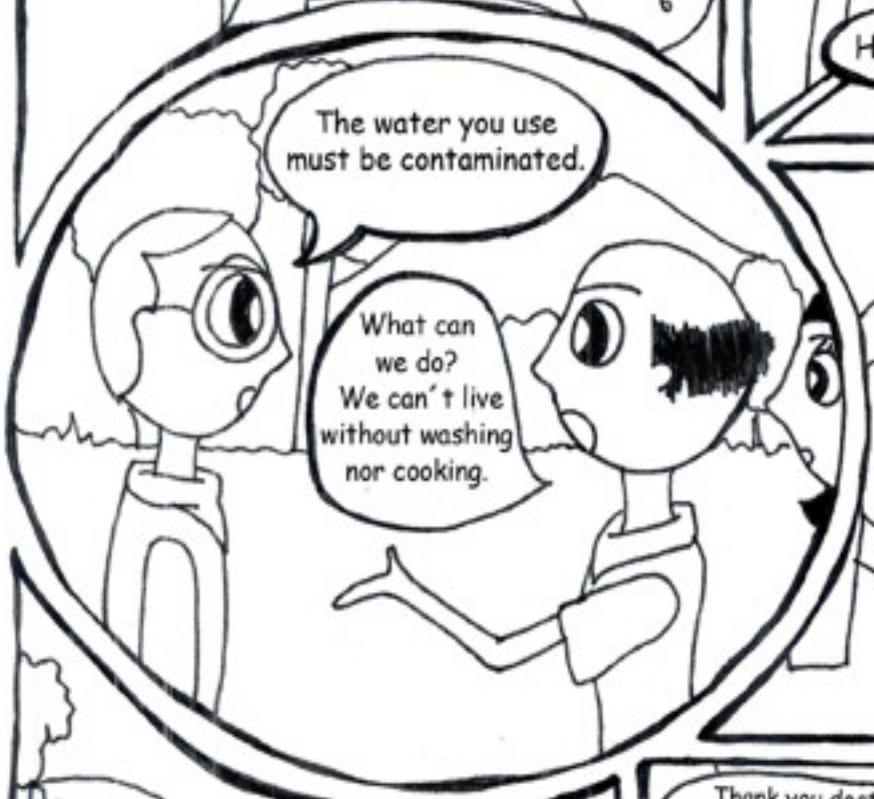

How long have you been living here?

About 3 weeks. What do they have?

They probably have TYPHOID

How did they get it??

The water you use must be contaminated.

What can we do? We can't live without washing nor cooking.

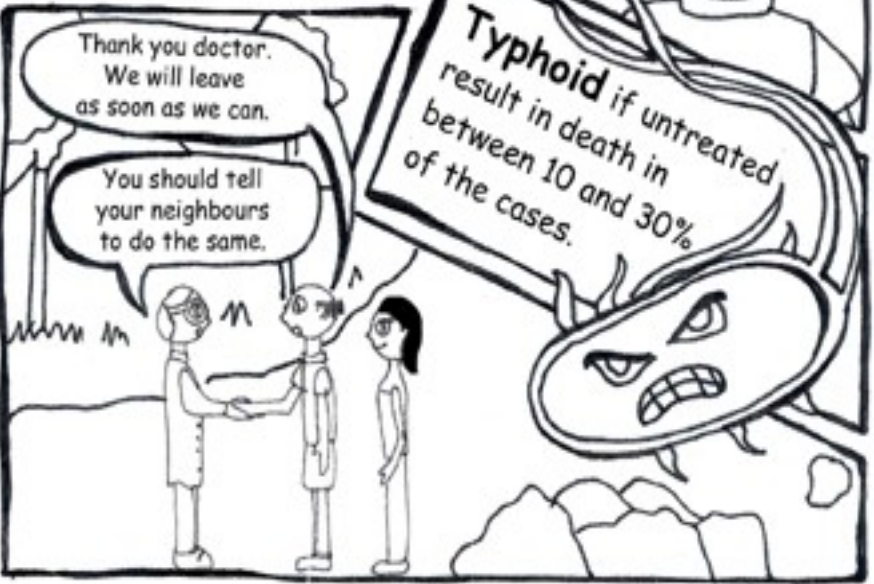

I am sorry, but all of you must go to somewhere with proper facilities to filter water.

We can't go. My son and daughter are too weak and we don't know where to go.

How are we going to cure them?

Give them these tablets and boil the water before you drink it.

Thank you doctor. We will leave as soon as we can.

You should tell your neighbours to do the same.

**Typhoid** if untreated result in death in between 10 and 30% of the cases.
